Hitech has extensive experience and a wide range of skills.

Hitech provides the best solutions and consultations for supplying oil and gas equipment.

Hitech is characterized by its quick response in providing solutions, consultations and training for those facing problems in the oil and gas sector.

## ABOUT US

Hitech General Trading LLC is a leading global supplier of industrial equipment and materials, headquartered in Dubai, with branch offices in Baghdad and agents in several countries.

### Why we are the best?

For many years, our company as an expanding engineering technical and trading company has been championing quality, reliability and flexibility and has earned an industry wide reputation for excellence with the aim of providing the most reliable, cost-effective and accurate business related solutions.

# OUR PRODUCTS

We supply equipment to the oil and gas industry, including exploration equipment, Drilling and spare parts

## GOLD & MINERAL SEPERATION

Trust us for all your mining equipment needs, as we specialize in supplying a range of Gold and Mineral Separation Equipment at Hitech General Trading LLC. Our offerings include Sluice boxes, Metal detectors, Trommels, High bankers, and Drywashers. Additionally, we provide Gold mining equipment such as Dredging machines, Wash Plants, Rock crushers, and Mineral separators.

## WATER TREATMENT PLANT

Hitech's range of equipment for water treatment facilities includes primary filtration systems such as sand filters, multimedia filters, and cartridge filters. These systems are designed to remove larger particles and impurities from the water before it undergoes further treatment. Secondary membrane treatments like ultrafiltration and reverse osmosis are used to remove smaller particles, bacteria, and viruses from the water. These processes involve passing the water through semi-permeable membranes that only allow clean water molecules to pass through, resulting in purified water.

Tertiary treatment involves disinfection methods such as UV sterilization, chlorination, or ozonation to kill any remaining bacteria and pathogens in the water. Chemical dosing systems are also used to adjust the pH levels and remove any remaining contaminants. In some cases, water treatment facilities may include a pre-treatment step before the primary filtration process. This step may involve coagulation, flocculation, or sedimentation to help remove suspended solids and organic matter from the water before it enters the primary treatment stage.

Overall, Hitech's equipment for water treatment facilities is designed to ensure that water is treated effectively and efficiently to meet the required quality standards for various purposes, such as drinking water, industrial processes, or agricultural irrigation.
